ULTIMIZERS, INC.

CURRENT PROJECTS

Busy, busy, busy!

We are in full production swing here at Ultimizers. Our team has been working hard to build our new 18U models for several orders that we have. This prototype has been well received by our customers. To give you a little summary, the 18U-SC7 has a patented top

conveyor belt drive. It is a high speed, durable and easily maintained cut-off saw. It has cutting cycles as fast as 130 milliseconds

that help increase production. The blade motor is servo controlled giving the user complete control of blade and cut speeds for optimum cut

quality control. The patented top conveyor belt drive is servo driven as well with a direct gearbox making cut-to-cut moves exceptionally responsive and smooth. Waste is removed at the blade as it is cut using high pressure air blow-off jets. The patented top conveyor belt

provides exceptional grip that resists slippage. The encoder near the blade provides very accurate measurements. Want to know more? Visit our

website at www.ultimizers.com to see pictures, videos and download our brochure. You can also call us at (503) 663-7263 to learn more as well.

WHATS COMING UP NEXT:

We are preparing for the IWF Convention in Atlanta, GA this August. We are excited to see what is happening in the industry and also show everyone what we have been working on as well. We are building one of our 18U-SC7 prototypes to have on display at the Convention. We would love for you to come by our booth and see this saw in action.
